

Executive Summary

Sales Analysis Dashboard

Project Overview

The **Sales Analysis Dashboard** is an interactive Business Intelligence (BI) solution developed to analyze and visualize sales performance using transactional sales data. The dashboard provides management with a consolidated view of key performance indicators (KPIs), revenue trends, customer purchasing behavior, product performance, and geographical sales distribution. It enables decision-makers to monitor business performance in real time and identify opportunities for improving sales and profitability.

The dashboard has been designed with an intuitive interface that allows users to filter data dynamically by **Delivery Date, Order Date, and Occasion**, making it easier to perform detailed business analysis and generate actionable insights.

Project Objectives

The primary objectives of this project are:

- To monitor overall sales performance through key business metrics.
- To identify the highest revenue-generating occasions and product categories.
- To analyze monthly and weekly sales trends.
- To identify top-performing products and cities.
- To understand customer spending patterns.
- To support strategic business decisions using data visualization.

Dashboard KPIs

The dashboard summarizes the business performance using the following key metrics:

KPI	Value
Total Revenue	₹35,20,984
Total Orders	1,000
Average Customer Spend	₹3,520.98
Average Order Delivery Time	5.53 Days

These KPIs provide an immediate overview of the organization's sales performance.

Dashboard Components

1. Revenue by Occasion

This visualization compares revenue generated during various festive occasions.

Occasions include:

- Anniversary
- Birthday
- Diwali
- Holi
- Raksha Bandhan
- Valentine's Day

Insights

- Anniversary generates the highest revenue.
- Raksha Bandhan is another strong revenue contributor.
- Diwali records comparatively lower revenue.
- Seasonal events significantly influence customer purchasing behavior.

2. Revenue by Category

This chart illustrates sales revenue generated by different product categories.

Categories include:

- Cake
- Colors
- Mugs
- Plants
- Raksha Bandhan Gifts
- Soft Toys
- Sweets

Insights

- Colors is the highest-selling category.
- Soft Toys and Sweets also contribute significantly.

- Plants and Mugs generate comparatively lower revenue.
- Product category analysis helps optimize inventory planning.

3. Top 10 Cities by Orders

This visualization ranks cities based on total customer orders.

Top-performing cities include:

- Imphal
- Dhanbad
- Kavali
- Haridwar
- Bilhaur Nagar
- Dibrugarh
- North Dumdum
- Bhatpara
- Agra
- Chinsurah

Insights

- Imphal records the highest number of orders.
- The order volume is relatively balanced among the top cities.
- Regional sales analysis assists in market expansion planning.

4. Revenue by Month

The monthly revenue trend identifies seasonal sales patterns.

Insights

- March records the highest revenue.
- August and November also show strong sales.
- April through July experience relatively lower revenue.
- Sales fluctuate throughout the year, indicating seasonal demand.

5. Top 5 Products by Revenue

This chart identifies the best-performing products.

Top products include:

- Magnum Set
- Quia Gift
- Dolores Gift
- Harum Pack
- Deserunt Box

Insights

- Magnum Set generates the highest revenue.
- Quia Gift follows closely.
- Product performance analysis supports pricing and marketing strategies.

6. Revenue by Day of the Week

This visualization compares sales revenue across weekdays.

Insights

- Tuesday generates the highest revenue.
- Sunday also contributes significantly.
- Wednesday and Thursday record comparatively lower sales.
- Weekday analysis helps optimize promotional campaigns.

Interactive Filters

The dashboard includes multiple slicers for dynamic analysis:

Delivery Date

Allows users to analyze sales based on product delivery periods.

Order Date

Enables filtering of orders placed during specific months or years.

Occasion Filter

Allows users to focus analysis on specific occasions such as:

- Anniversary
- Birthday

- Diwali
- Holi
- Raksha Bandhan
- Valentine's Day

These filters improve usability by enabling customized business analysis.

Business Insights

Based on the dashboard analysis:

- The business generated **₹35.2 lakh** in total revenue from **1,000 orders**.
- Average customer spending is approximately **₹3,521 per order**.
- Average delivery time is **5.53 days**, indicating an efficient logistics process.
- Anniversary and Raksha Bandhan are the most profitable occasions.
- Colors, Soft Toys, and Sweets are the highest-performing product categories.
- March, August, and November represent peak sales periods.
- Tuesday and Sunday record the strongest sales performance.
- Imphal leads in customer order volume, highlighting a strong regional market.

Benefits of the Dashboard

The Sales Analysis Dashboard provides several business advantages:

- Enables quick monitoring of sales performance.
- Supports data-driven decision-making.
- Identifies high-performing products and occasions.
- Assists in inventory and demand forecasting.
- Improves customer and regional sales analysis.
- Facilitates trend analysis using interactive filters.
- Enhances strategic planning and marketing effectiveness.

Technologies Used

- **Microsoft Power BI** – Dashboard development and data visualization
- **Microsoft Excel** – Data collection, preprocessing, and cleaning

- **Power Query** – Data transformation and preparation
- **DAX (Data Analysis Expressions)** – KPI calculations and measures
- **Data Modeling** – Establishing relationships between datasets

Conclusion

The **Sales Analysis Dashboard** successfully transforms raw sales data into meaningful business insights through interactive visualizations and KPI reporting. By providing a comprehensive view of revenue, customer behavior, product performance, seasonal trends, and regional sales distribution, the dashboard empowers stakeholders to make informed decisions, optimize marketing strategies, improve inventory management, and enhance overall business performance. Its user-friendly interface and dynamic filtering capabilities make it a valuable tool for continuous sales monitoring and strategic planning.
